

DESCRIPTION

Copper multi-strand with a section of **1,5mm²** for an excellent conductivity: **Up to 1250 m per installation !**

Tinned copper limiting the oxidation and facilitating the welds.

Compatible with Osvan, 3M, Hella or equivalent connectors.

Non-toxic (standard ACS, WRAS), without any animal fat, **does not attract the rodents!**

Double insulation totally **tight**, insensible into humidity (used for permanent immersion - AD8).

Outside diameter of 5,9mm, compatible with the majority of cable-layers (optional adapters).

Very high mechanical strength: ground movements during periods of drought

Metric marking from 300 to 0.

Blue colour, easy to spot in the ground.

Without any decrease or disturbance of magnetic fields. No additional metallic braid.

GARDEN CLEAN CABLE

Ultraresistant cable for robot mowers

300m

Tight

1,5mm²

Tinned copper

INTRODUCTION

The "Garden Clean Cable" is specially designed for robot mowers. This cable to be buried allows to avoid most of the problems known with the standards cables, extremely flexible, tinned copper, 100% tight (AD8), having an outer jacket protection **without any toxic material and animal fat, not attracting the rodents.** After several years of use on the field, the retailers have seen a very strong reduction of the interventions bound to damages of the cable, pulling fewer wastes of time and money as well as a higher customers satisfaction having invested in a robot mower.

INSTALLATION

The installation of "Garden Clean Cable" is similar as the installation of standards cables. It can be used by most of cable-layers on the market. The connections are made in an identical way or by welding or by using tight connectors. For insulation displacement connectors, the blue outer jacket has to be removed by the OSVAN wire stripper. The installation stays very easy with a higher quality cable. **OSVAN proposes connectors, adapters for cable-layers, accessories and robot mower houses.**
